About Us

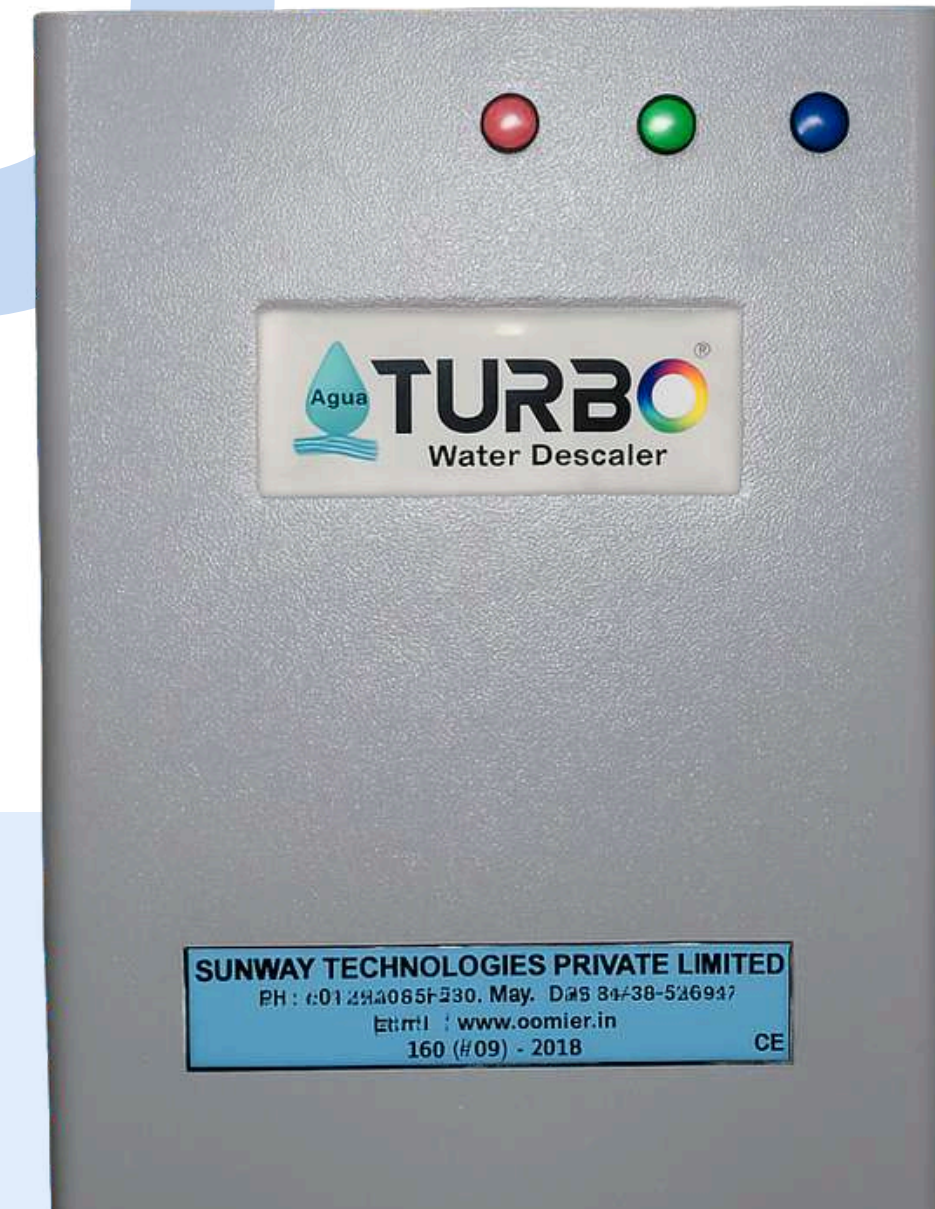

Established in 2011 with expertise in water treatment & purification. Serving apartments, industrial, commercial complexes, and Residential.

Aqua Turbo Water Descaler

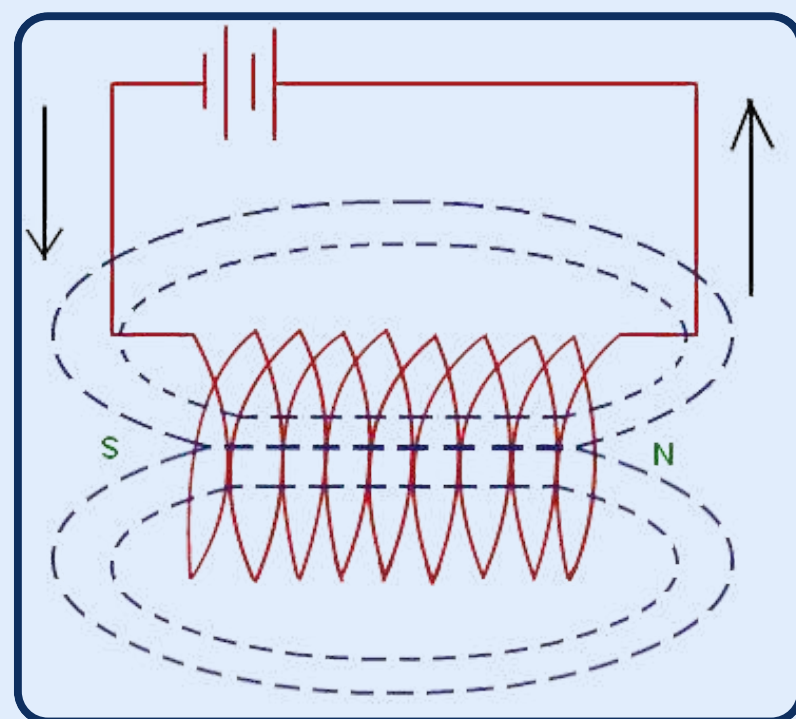

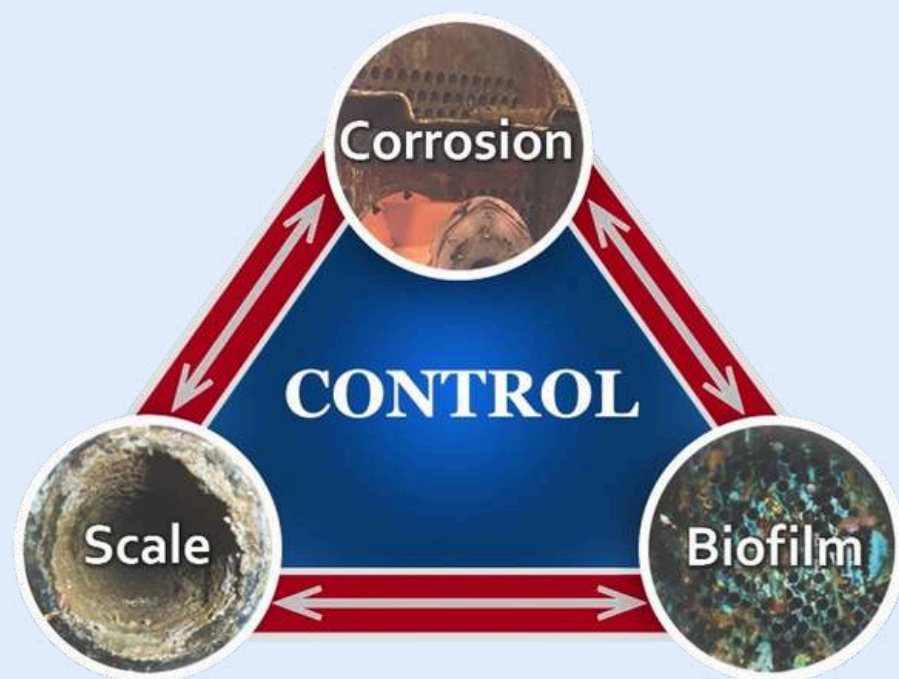

Aqua TURBO is been Manufactured by Sunway technologies Pvt Ltd and supplied throughout India. TURBO offers an Eco-friendly Electromagnetic technology that comes with an outstanding quality commitments with Five Year Warranty. It Solves the problems with Hard water & Scaling's in Residential, Commercial and Industrial Applications. Turbo is there in market for more than 8 years. It works all types of pipes.

Working Principles

Microprocessor-controlled dual-frequency electromagnetic system with two independent cable channels wrapped around the pipe.

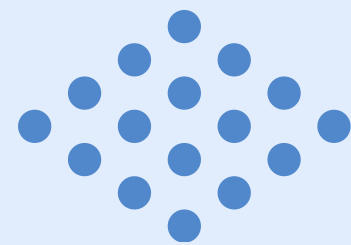

- ✦ **Channel 1:** Ultra Low Frequency (50 Hz - 5,000 Hz) - long wavelength, travels farther to treat water deep into the system.
- ✦ **Channel 2:** Very High Frequency (50 Hz - 50,000 Hz) - short wavelength, quickly breaks down hard mineral bonds.
- ✦ Frequencies neutralize calcium bicarbonate (calcite) bonding ability, converting it into aragonite crystals that remain suspended.
- ✦ Prevents new scale formation and gradually removes existing scale using natural H_2O and CO_2 action inside the system.

How Aqua Turbo Works

- ✓ Step 1: Water enters the treated Pipes → 💧
- ✓ Step 2: Special electromagnetic fields modify crystalline structure of calcium & magnesium minerals → ⚡
- ✓ Step 3: Minerals remain dissolved, preventing hard scale formation → ♻️
- ✓ Step 4: Existing limescale softens and is carried away with water flow → 🚰

Technical Specifications

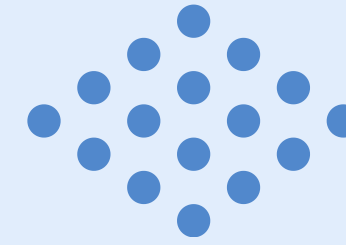

Max Hardness Handling:

Up to 3000 ppm

Models:

Domestic, Commercial,
Industrial

Installation:

Inline, no cutting of
pipes for clamp-on units

Key Benefits & Advantages

Prevents scale formation in plumbing & appliances

No chemicals, salt, or filters required

Gradually removes existing scale

Extends the life of appliances

Improves the efficiency of heating systems

Maintenance-free & eco-friendly

Global Hard Water Problem

Hard water contains high levels of calcium and magnesium, leading to:

- Limescale buildup in pipes and appliances
- Reduced heat transfer efficiency
- Damage to fixtures and equipment

BEFORE

AFTER

BEFORE

AFTER

Key Benefits For Industrial Applications

01

Boilers/heat exchangers

Prevents scale on boiler tubes and heat exchangers, improving heat transfer efficiency.

02

Fire protection lines

Prevents scale in fire protection lines, ensuring clear water flow and dependable emergency performance.

03

Cooling Towers

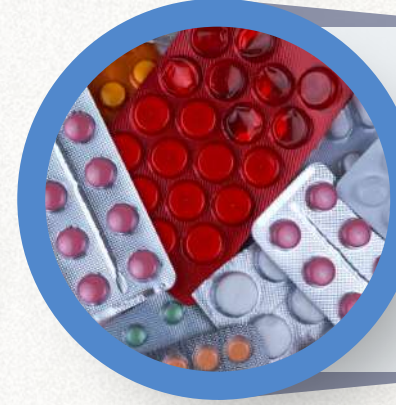

Minimizes scale in cooling towers, improving heat rejection efficiency, reducing water usage.

04

Medicine & Pharma Industry

Ensuring consistent quality and regulatory compliance in medicine and pharma production

05

Food & Beverage

Ensuring consistent product quality, reducing downtime, and supporting food safety compliance

06

General scaling effects:

Improving water flow, heat transfer efficiency, and overall system performance.
